Hi, all,

There are over 360,000 nurses in California—Nurses are a strong and caring force in healthcare and in the community.

Caring: Think for a moment about what you do every day as a nurse and how many people you have helped and have the potential to help. Although, you may have an assignment or routine, it is often what seems like “little things” that count. Did you smile and say good morning to people on your way into work? Did you hold open a door for someone, particularly a patient or family member? Did you approach the “lost looking” person in the hallway and ask if you could help? And did you take an extra few minutes to walk or wheel that person to the clinic he was trying to find? Did you feel better for doing these things? They did. Does it take more time to care? I would pose that it can be easy to care, and that it saves time in the long run.

What is caring? The thesaurus offers: kind, thoughtful, gentle, helpful, considerate, compassionate, concerned, loving, and sensitive. Would that we are all of these!

Having grown up in the “olden” days when we bathed and gave back rubs to patients before they went to sleep, I wonder what happened that changed our practice. Certainly technology has enhanced healthcare, but did we really have to stop some of the “caring” practices. Did that patient who got the bath and back rub, sleep better, heal more quickly, respond better to treatment, feel better? My guess is yes. With fewer call lights coming on, as well.

Ah, one might ask: Do we have time to “care”? My answer is—we must have time to care.

One of the most powerful spots encouraging people to choose nursing as a profession—that I ever saw came from another country. There were scenes of nurses taking care of patients, talking to them, comforting them, holding a hand, helping a patient to stand. There was no talking, some music, and the words at the end were: “What did you do today?” Think about this: how would you—already a Nurse, answer that question?

To take that to the next level, how is our caring demonstrated in other ways and places? Do you support Nurses and Nursing where you work? Do you meet your ethical obligation to speak up when the care needs to be improved? Do you “care” enough to be more involved, at work, outside of work? Do you get involved in the community? In Politics? Do you take care of yourself as well?

Do you care enough to continue learning, to further your education and to support your colleagues who do?

And, do you belong to your professional nursing associations? Many of my colleagues in administration and academia encourage Nurses to join at least two associations: your professional general organization, ANA California, and your specialty organization. That will keep you up-to-date on all things nursing and healthcare! It will provide opportunities for you to get more involved, to meet new colleagues, to work together to improve healthcare and Nursing.

The message is to get involved, bring your caring as a nurse to the workplace, to the community, to the capitol, and to your professional association. Our ANA California elections are coming up and consent to serve information is in the Newsletter. Please consider running for office; it is an opportunity to get involved, to make a difference.

The American Nurses Association House of Delegates is in June and we shall be sharing what we know from our members and other Nurses as we discuss the current issues and do the business of the association. When we return, we shall be writing articles about the happenings at the ANA House so we may keep California nurses informed.

On a personal note, I again want to again say thank you to our ANA California Board members who continue to work hard, to promote quality healthcare for the public, participate in healthcare reform and support the Nursing profession. Always remember, what one person does can make a difference.

Issues: Health Care Reform: continues to be in the news; more positions in government are opening for Nurses. Please check the American Nurses Association California website and the American Nurses Association website: www.nursingworld.org for the latest information about healthcare reform, health care issues and nursing issues; also a video link to: ‘Nurses Have Power: Let’s Use It for Change’. Please also see on the nursingworld.org link to the “Key Provisions Related to Nursing and Health Care Reform.” Nurses continue to be a significant “caring” force in healthcare reform, through their work, community and political involvement at local, state and national levels.

I continue as a member of the Executive Committee of the ANA Constituent Assembly (CA; the group of the Presidents and Executive Directors of all of the states plus a number of other constituents). I intend to share with you any updates on the issues.

We welcome you to send any comments, suggestions, again, thank you to the ANA California Board members, and to the ANA California staff who do such a wonderful job in supporting us and the association, and in making good things happen.

And to our families for their support of our work and time. Because we care.

Elissa Brown
President, ANA California
Have you or one of your colleagues been recognized for an accomplishment, elected to office, won an award, received a grant or scholarship, launched a new venture? Tell us about it! Send name, address, phone number, and dates for an accomplishment, elected to office, won an award, received a grant or scholarship, launched a new venture?

ANA\C Wants To See You…. IN THE NEWS

Tricia Hunter, RN, MN
Executive Director ANA\C

Thank you to the 200 plus nurses who testified on both these bills! Thank you to the many of you who sent emails and letters! You made a difference. Both bills have died.

ANA\C also wants to give a special thank you to Senator Keloe, Senator Leno, Senator Hancock, Senator Pavely, Senator Negrete McLeod and Senator President pro Tem Steinburg for supporting the children of California and opposing SB 1051 Diastat. All expressed their concerns about using the budget to lower standards of care in the State of California. They stated this was not the answer.

ANA\C also wants to thank Assemblymember and Chair Hayashi, Assemblymember Hill, and Assemblymember Nava for voting no on AB 1802. They all listed through a long hearing with over 200 people testifying against the bill.

AB 1802 Insulin and SB 1051 Diastat

This legislative session was a really tough one with two bills introduced to allow employees of school districts to volunteer to give insulin and/or diastat. The definition in law of a volunteer is someone who is not paid to perform a service. If you are paid for an activity, you are liable if you make a mistake. If you are a real volunteer, you are not liable.

The American Disabilities Act requires that schools provide appropriate services for children so they can be mainstreamed into school. A lawsuit in Kansas clarified that this included health care services. ANA\C has been very frustrated and disappointed that we cannot get the parents to join us in fighting for their children’s rights. The children have a right to an appropriate licensed practitioner to provide the medical services needed by their child. Instead, their national associations are fighting to change California law and allow unlicensed persons to administer the drugs.

Having a school nurse is a choice of a school district. Many school districts have made this choice and use a coalition of LVNs and RNs to provide the services needed in the school district. The need for a school nurse is not just for insulin or diastat but also for many other health care issues. One school nurse testified that she had 14 students with transplants in her school district.

Part of the testimony for the legislation stated that other states allowed unlicensed person to administer the drugs. We did a review nationally and found out that the states who allowed unlicensed persons to give drugs had a school nurse who delegated licensed tasks to a health aid, after a student health assessment. The school nurse determined when an act was going to be delegated and under what circumstances. The health aid did not have any other responsibilities in the school.

In the past, ANA\C has worked with groups to develop an education plan for school employees to give epinephrine. Epinephrine pens are premeasured and the drug cannot hurt anyone if given wrong. It will cause discomfort if administered wrong and you cannot overdose.

Insulin is a drug that has to be measured based on the diet of the recipient and their blood sugar. Judgments must be made to the dosage. This is the drug that nurses are expected to have someone check their dosage when they draw up the medication. Insulin is the drug that harms more people in hospitals than any other.

Diastat is given while a student is having a seizure. The person administrating the drug is suppose to be able to assess what type of seizure the student is having and then give the drug rectally.

Proponents of the bills stated the Board of Registered Nursing had changed their policy in the last year concerning teaching unlicensed persons to administer these drugs. This is just not true. The BRN has been consistent in their position about Registered Nurses teaching unlicensed persons to provide licensed activities. The question has been asked many times by school nurses going back to when I was on the BRN. We held a full day hearing on the issue in the 80’s. A school nurse had asked the BRN earlier in the year if she were allowed to teach unlicensed persons how to administer diastat. The BRN stated, as has always been the policy, that the nurse could not teach licensed acts to unlicensed persons.

We believe these bills will be coming back next year. All the documents related to these bills are on our website. Please become informed and help us keep California’s children safe.
Board of Registered Nursing Education Advisory Committee Meeting

Louise Timmer attended the Board of Registered Nursing (BRN) Advisory Committee May 13th in Sacramento on behalf of ANAIC.

The BRN Advisory Board meeting was spent with these issues:
- refining the Annual BRN School Survey questions,
- discussing the CINHC New Graduate Survey,
- the current Flooding of the market with new Graduate RNs,
- the recent cuts to the CSU nursing programs, and
- the CSU pressure to place the CSU pre-licensure nursing programs into the Extension/Continuing Education department and out of the main campus system.

The BRN School Survey
Clarification of questions and definitions were included that related to the full time and part time faculty. The CC, CSU, UC systems use different definitions for hiring and use of part time faculty. The main goal is to obtain information on the integrity of the pre-licensure programs to ensure the integrity and quality of the programs. Definitions and qualifications for employment need to be determined by the BRN and placed in the Regulations.

Faculty salaries were discussed and again this is a complicated issue among the three systems. Faculty vacancies continue to be an important part of the School Survey.

Second degree pre-licensure nursing programs, ie, ELM and accelerated BSN programs need clarification in the survey in relation to— the Clinical Nurse Leader focus of some ELM programs and not others. Employers need to know what exactly the second-degree RNs are prepared to do in hospitals.

BRN/CINHC New Graduate Survey
The CINHC-BRN New Graduate Survey will be placed on the BRN website for new graduate RN who graduates between Jan. 1, 2009 through March 1, 2010. The RN pool is 13,000 new graduates. In addition, all 13,000 new graduates will be mailed a survey that is voluntary. The questions relate to how many places they applied, how long it took to find employment, what jobs did they take before they were employed as an RN in a hospital or community agency, etc.

New Grads working without pay in hospitals
Discussion occurred relating to the types of employment new grads are taking such as:
- Unpaid internships in hospitals
- School-based internships in hospitals (tuition and academic credit courses)

Department of Labor grants to establish unpaid internships in hospitals (hospitals are getting money to hire new grads, who are not paid for work)

Flooding market with new grad RNs
A discussion from the CSU Chair members focused on the recent “flooding” of the market with new grad RNs is providing the CSU Presidents with an errant conclusion that there are too many nursing students. The recent budget cuts have resulted in decreased enrollment, smaller class size, and consideration of a closure of one nursing program. The CSU is no longer accepting applications to the nursing programs from the CCC system.

CSU system placing pre-licensure nursing programs in Continuing Education/Extension Office
Another result from the state budget crisis is reflected in the Presidents’ suggesting that the nursing programs be offered by the Continuing Education and Extension Office. Some CSU nursing programs have made plans to place the accelerated BSN/ELM programs and RN to BSN collaborative programs in the Continuing Education/Extension office. This takes the budget allocations off the main campus budget and makes the students pay the same tuition as private institutions. It is the belief that the CSU will place the generic BSN programs in the CE/Extension Office and close down the on-campus generic BSN programs. Humboldt campus is a prime example of the President and Faculty Senate to remove the BSN program from the main part of the campus.

CC system
There has been a 20% drop in enrollment in the CC nursing programs since 2008. Many of the CC nursing programs are on Governor Schwarzenegger grants which may result in a rollback to the 1999 enrollment rates and perhaps result in closing.

ANAIC Practicum

by Candace Campbell, MSN-HCSM, RN

As a young nursing student, I was privileged to serve on the California Student Nurses’ Association State Board for two years, as the Range of Motion newspaper editor. As their reporter, I drank in the national nursing conventions debate and political process. And then...scroll ahead three children, and many years as a clinician.

In 2010, as a Health Care Systems Management student, I was challenged to think outside the box when choosing a Practicum experience. I leaped at the chance to rub elbows with nurses involved in professional and patient advocacy on the state level in Sacramento. Having attended the 2009 Lobby Days seminar, I had met ANAIC Executive Director, Tricia Hunter, MA, RN, and Myrna Allen, MA, RN, Associate Director, and was eager to be under their Director, Tricia Hunter, MA, RN, and Myrna Allen, MA, 2009 Lobby Days seminar, I had met ANAIC Executive Director, Tricia Hunter, MA, RN, and Myrna Allen, MA.

The Practicum Project: Grassroots Organizing for Legislative Change
The Practicum Project goal was to flex this student’s advocacy muscle, and to give back to the institution (Government Relations Group), who allowed me access to their knowledge and expertise. Myrna assisted me to create an outline for the project based on legal, ethical, and practical matters. The plan was to harness grassroots advocacy by means of direct action, leadership development, and civic engagement to block two onerous bills from passing in the legislature, and advocate for the other two bills. As a film maker, author and artist, I was pleased to realize that conceptualizing, planning, and implementing the plan for a grassroots campaign is similar, in terms of process, time, and energy expenditure, to any creative project with a deadline.

Bandaid on the Problem vs. Palpable Solutions
Two of the bills the ANAIC opposes would grant legal immunity to public school districts, if i when dispensing errors are made by unlicensed personnel administering insulin and Diastat (Valium) rectal gel to students K-12. Such legislation would not only put medically vulnerable students potentially in more danger, it would codify an illegal act. (In California, the California Business and Professions Code, which contains the Nurse Practice Act, prohibits unlicensed administration of medication.) http://www.rn.ca.gov/regulations/bpc-shn/b2725.html Also, either of the first two bills passed, the big winner would be “the CSU system placing pre-licensure nursing programs in Continuing Education/Extension Office.

Second degree pre-licensure nursing programs, ie, ELM and accelerated BSN programs need clarification in the survey in relation to— the Clinical Nurse Leader focus of some ELM programs and not others. Employers need to know what exactly the second-degree RNs are prepared to do in hospitals.

Implementing the plan
The goal was to harness grassroots advocacy by means of direct action, leadership development, and civic engagement. The objective was to engage as many people as possible, on as many levels as possible, in a short amount of time, ie, to create a buzz. To accomplish this, I spoke individually with neighbors, then branched out to groups, associations, labor unions, and widened the net with radio listeners, and those reading my blog. Of course, I also spoke to all the legislative aides from each of the legislators of each committee, who would hear each of the bills.

At press time, the two bills we opposed have been defeated, and others support will be coming up soon for vote.

Summary
The Practicum experience proved invaluable in affirming this student’s call to represent the nursing profession in meaningful ways. I look forward to adding to this body of knowledge and proactively serving the nursing profession on the local, state and national arenas, and I strongly urge any nurse who wants to learn more to attend Lobby Days (held each spring in Sacramento) and consider a legislative-focused residency to fulfill your graduate work.

Candace Campbell, MSN-HCSM, RN, is a NICU clinician and educator. She serves as a spokesperson for the March of Dimes in California, and as a member of the AWHONN Editorial Advisory Board for their two consumer magazines. Visit www.candycampbell.com to learn more.
The Tri-Council for Nursing has developed this document to inform key stakeholders of the urgent need for a more educated nursing workforce. The focus of this policy statement is on the educational advancement of the current and future nursing workforce to address the need for improved patient quality and safety. This message of common view is shared by the four diverse nursing organizations that collaborate through Tri-Council. More nurses with baccalaureate and higher degrees are needed in all settings. The leaders of the profession acknowledge that nurses are at a critical crossroad in the direction for academic progression through formal, degree-granting programs.

A. Need for Education Advancement

The complexity of care and the predicted shortage of RNs to provide care that drive the need for those nurses in the workforce to be better prepared. This is necessary for increased research to be delivered by a greater number of nurses, including baccalaureate, master’s, and doctoral degrees. A wide variety of pre-licensure programs are needed to prepare for today’s workforce, including degree-completion, online, accelerated, and part-time degree programs.

B. Complexity of Health Care Environment and Practice

The increasing complexity of technology, medical therapies and treatments, and chronic health conditions in all age groups underscores the need for nurses to be more highly educated. Increased education and advanced degrees will better prepare RNs to develop process improvements that address medical errors, reimbursement issues, navigating multiple systems of care, and other challenges that address medical errors, reimbursement issues, and quality improvement. These methods are core to professional nursing practice. In addition, quality, safety, and diversity of needs are critical to appropriate care, and new methods of care require competence in these areas. Nurses prepared in baccalaureate and higher degree programs are prepared to use a systems approach in addressing outcomes related to disparities that preclude quality care. These approaches require that nurses have advanced study and are prepared for system change implementation.

C. The Need to Address the Nurse Faculty Shortage

AACN and NLN data demonstrate current nursing faculty shortages. Advanced education opportunities will expand the pool of nurses able to pursue academic preparation to fill nurse educator roles and to continue adding to nursing research. The most recent data (National League for Nursing, 2009) shows that the current supply of nurse faculty is at 86% of the faculty needed. The supply of nurse faculty members prepared in diploma programs had obtained graduate degrees in nursing or related fields. Additionally, only 22.1% of nurses prepared initially in a baccalaureate program had obtained post-RN master’s or doctoral degrees. To solve the need for faculty and more APRNs to manage new models of care, a greater majority of diploma, Associate Degree in Nursing (ADN) and Bachelor of Science in Nursing (BSN) graduates must pursue advanced study.

Call to Action:

A. System Changes in Nursing Practice and Education

Education: An increased emphasis on role development and professional accountability through continued academic education needs to be placed in nursing curricula in all program types. Schools of nursing must collaborate to actively promote more streamlined models of progression to baccalaureate and graduate degrees including LPN to BSN, RN to MSN, and/or BSN to doctorate programs, among other routes. Clear and reasonable articulation agreements are needed so that educational progression is not repetitive of nurses’ previous education and experience and achieve the goals of accessibility and flexibility, regardless of educational delivery location and method.

When considering legislative options to implement programs of support for nurses who pursue baccalaureate and graduate degrees. These programs should include both financial and professional incentives.

Professional Associations: National nursing organizations must make a commitment to the academic progression of their membership as a cornerstone of their strategic plan.

B. Individual Responsibilities of Nurses to Access Education

Personal responsibility is critical to academic progression of the nursing profession. While regulation and requirements may require advanced education for future advancement, a hallmark of professional accountability is action on the part of each member of the profession to be informed of the evidence, appreciate the urgency of the academic progression issue, and pursue academic progression in the manner best suited to the individual’s situation.

C. State and Federal Policy Initiatives to Promote Academic Progression

State Initiatives

State governments should work closely with their boards of nursing to ensure that educational standards remain high and opportunities are needed for nurses seeking preparation as advanced preparation are needed to meet the healthcare challenges of the nation and to deliver effective and safe care.

Federal Initiatives

The primary source of federal dollars for the profession is the Nursing Workforce Development programs (Title VIII, Public Health Service Act), which addresses all aspects of the nursing shortage—education, recruitment, retention, and practice. Over the years, rising educational requirements have increased the number of Title VIII programs from supporting sufficient numbers of nurses and nursing students. A larger investment must be made in these programs, and in the dollars invested in Title VIII should give preference to nursing students enrolled in RN-BSN, BSN, accelerated BSN, and graduate nursing programs. From 1971 to 1978, Congress provided capital grants (formula grants based on the number of students enrolled) to schools of nursing in support of nursing education. These
What Happened to Education Bills AB 867 and AB 2400?

This year ANA/C has been actively involved in promoting the passage of two education bills; AB 2400 Baccalaureate nursing programs pilot project for the community college system and AB 867 the Doctor of Nursing Practice program for the California State University system. Both bills allow registered nurses access to advanced nursing degrees.

AB 867 CSU DNP bill
AB 867 is in its third year of being heard by the Legislature. The bill will permit the CSU system to grant the Doctorate of Nursing Practice. The bill is supported by the chairpersons/directors of the CSU nursing programs. The bill will increase the number of doctoral prepared advanced practice nurses and increase the pool of nurse educators for California’s 140 pre-licensure nursing programs and numerous graduate nursing programs.

The bill is stalled in the Senate Appropriations Committee. Dr. Lucy Huckabay, Chairperson, CSU Long Beach nursing program believes that letters from registered nurses, especially graduate nursing students to the members of the Senate Appropriations Committee would help get the bill out of the Committee and to the Senate Floor for a vote. It is expected that the Senate will vote in favor of AB 867 and Governor Schwarzenegger will sign it in October. Letters, emails, phone calls should be directed to the members of the Senate Appropriation Committee: Kehoe (Chair), Cox (Vice-Chair), Aiquist, Corbett, Denham, Leno, Price, Walters, Wolk, Wyland and Yee. Contact information: www.leginfo.ca.gov for individual members or contact Staff Director: Bob Franzoia Phone:(916)651-4101.

In an email from Dr. Huckabay, an explanation is offered for the need to pass AB 867. She explains:

One of the major reasons for this hold up is that the Committee members believe it will cost money to offer the DNP program and that it will drain the monies from the pre-licensure component of the CSU curriculum to the DNP.

The idea is not new, in fact, 17 states changed its legislation in a friendly and easy to understand venue, as well as the issues that affect the nursing profession.

The goal; to open up new avenues of thinking as to how nurses can participate in the legislative process and support the nursing agenda throughout the state of California. It is important that all nurses and school of nursing students know and understand that their voice can and will protect and enhance the nursing profession, as well as nursing’s position in the medical and political communities. Because we shape the agenda around the issues and committees happening at the time, the agenda will not be available until a couple weeks before the event. You must register at least two weeks before the event. Late registrants are not guaranteed a position. Email confirmation and packets will be sent.

On April 4th & 5th 2011, the American Nurses Association/California will present a dynamic educational conference in Sacramento: RN Days 2011. The program will focus on opening the world of politics and legislation in a friendly and easy to understand venue, as well as the issues that affect the nursing profession.

The intent is to provide access to associate degree nursing students the option to complete the baccalaureate nursing degree while still in the nursing program. The outcome is to increase the number of baccalaureate prepared nurses in California and create a larger pool for graduate study in advanced practice nursing programs and education.

The idea is not new, in fact, 17 states changed its community college charter to permit baccalaureate education. The effort began in 1998 in Florida and New York. A national association, Community College Baccalaureate Association (CCBA) was formed in 1998 and has data on the outcomes of the states’ efforts in producing more baccalaureate graduates in the local areas. CCBA provides research data on the outcomes to the local communities. The change in the 17 states’ CC charters has attracted new businesses and industries to the local areas. The local community colleges offer a steady pool of baccalaureate, health care, police and firemen, science majors, engineers, and teachers to meet the needs of local business companies, hospitals, schools, police departments, and fire departments.

More information is available at the website www.ccba.org.

AACN supports BSN programs at the community college system and CCNE will accredit the nursing programs. The California Community College system has 72 nursing programs and graduates over 7,000 registered nurses every year. The CC nursing directors are in support of offering the BSN program at the local campus. This opportunity will lead to more baccalaureate prepared nurses and add to the current efforts of the grant-supported collaborative CSU-CC BSN projects to graduate additional BSN graduates. The effort does not affect the CSU and private institutions RN to BSN completion programs and the demand by 300,000 practicing associate degree nurses seeking the BSN degree.

Unfortuantely, 2400 bill was pulled at the last minute by the author and chair of the Assembly Higher Education Committee. Assemblymember Block before the bill could be heard in the Committee.

Nursing Education
California health officials Tuesday imposed “Immediate Jeopardy” fines totaling $475,000—including a $100,000 fine that is the highest so far—on seven California hospitals they said harmed patients or placed them at risk of harm in three separate incidents involving surgical errors, deficiencies in care and preventable preventions.

According to state documents, a surgical team left a sponge inside a cancer patient—which went undiscovered for more than 12 hours—during her hysterectomy in San Diego. A doctor operated on the wrong knee on a patient in San Francisco. And a provider in Davis wrongly injected a patient with an iodine contrast agent to which she was allergic before administering a CT, causing her fatal respiratory arrest.

“In administering these administrative penalties, one goal is to improve the quality of healthcare in all California hospitals,” said Kathleen Bilingsley, deputy director for public health. She said money from the fines will be used to gather information “to determine how these instances of serious deficiencies can be decreased and eliminated over time.”

The latest state fines bring the total assessed since 2007 to $4,225 million, of which $2.87 million has been collected so far. Bilingsley said of 146 penalties, hospitals are appealing 37, but to date, no hearings have been held.

Under state law, which took effect Jan. 1, 2009, hospital penalties were increased from $25,000 per incident. After that date, a hospital’s first immediate jeopardy carries a $50,000 fine, the second carries a $75,000 penalty, and the third and subsequent incidents will cost $100,000 each until the hospital goes three years with no immediate jeopardy findings.

The seven hospital penalties announced Tuesday are:

1. Southwest Health Care System in Murrieta received three fines—including one for $100,000—for alleged serious deficiencies state officials discovered there last year, bringing to six the total number of fines levied against the hospital for similar deficiencies.

Southwest was fined $50,000 or an event last August in which the hospital failed to properly assess newborns for risk of hyperbilirubinemia, or jaundice, before they were discharged.

They were fined $75,000 after a repeat investigation in September found that babies with the condition were still being discharged home without proper screening and treatment.

They were also fined $100,000 for an incident, also in September, after state investigators found that levels of hemoglobin in newborns were not tracked in the inpatient unit while C-sections were being performed, “creating a risk for a fire to start during the procedures” and posing a risk to the mothers and babies, state documents said. During the time of the error, the state said, there was a delay that cause sparks in an effort to stop bleeding, procedures that take place in a suite right next to the newborn nursery, labor and delivery area, and triage rooms, state documents said. “If a fire broke out in the C-section operating room it could spread to those rooms.”

2. Scripps Mercy Hospital, San Diego, was fined $25,000 because a surgical sponge was unaccounted for after a November 2007 hysterectomy. During a follow-up MRI scan more than a year later, the radiologist reported a 4-inch by 4-inch area in the lower abdomen that was under suspicion because it was not consistent with the patient’s oncologist, said the state.

The patient complained of hip and back pain “and a second and third [doctors] went in to search for the foreign body, but no foreign body was found at that time. A subsequent abdominal X-ray report ... and surgical procedure report ... continued to document the presence of a foreign body” in the patient’s pelvis, said the state.

The sponge was finally removed in June 2009.

“These violations resulted in injury and harm to [the patient] when she required a third surgical operation to retain a retained 4 inch by 4 inch surgical sponge from her abdominal/pelvic cavity, approximately one-and-a-half years after the initial surgery,” the state said.

3. California Pacific Medical Center, Pacific Campus in San Francisco, was fined $25,000 because a surgeon performed a 2008 surgery on a patient’s right knee instead of the left, as intended. “They should have done a time out [a period prior to surgery for checking the right patient and right procedure] but they didn’t do one, they went straight into the procedure,” said the state.

“When the surgeon realized the mistake, he proceeded to an arthroscopy of both knees even though the consent form was for the left knee only,” the state said.

4. Sutter Davis Hospital was fined $25,000 for a 2008 incident in which a patient with a serious airborne diseases and who had neck pain and swelling was administered an iodine contrast material prior to performing a CT scan conducted by the surgeon, according to state documents.

According to state documents, the patient had a history of iodine allergy, but her medical records were not checked beforehand, nor was a physician in the room as she was undergoing the procedure.

During the CT procedure, “the nurse observed [the patient] having some type of distress, the nurse and attending physician attempted to stop her breathing, but the patient’s oxygen level and blood pressure fell and a Code Blue emergency was called,” according to state documents.

“When minutes of receiving the contrast injection, [the patient] experienced breathing difficulty, low heart rate and low blood pressure requiring rescue interventions and interrupted the imaging studies. [The patient] did not respond to stabilizing treatments over the next two hours and expired in the radiology suite.”

5. Kaiser Foundation Hospital in Fontana also received two penalties, the first for $25,000 for an incident in 2008 in which a patient undergoing surgery to remove orthopedic hardware from his left knee received a 2-inch sharp blade extender tip instead of the 3-inch one he was supposed to have, said the state.

“During the CT procedure, ‘the nurse observed [the patient] having some type of distress, the nurse and attending physician attempted to stop her breathing, but the patient’s oxygen level and blood pressure fell and a Code Blue emergency was called,’” according to state documents.

6. St. Joseph’s Hospital in Orange was fined $50,000 because a double pneumonia patient who required oxygen was transported on an ultrasound test without a tank containing sufficient amount of oxygen for the test, said the state. “In administering the ultrasound test [in the ultrasound department, the patient had a respiratory arrest and died],” state documents said. “It was observed at the time of the test, that the oxygen tank connected to the patient was empty.”

“The patient was transported to the radiology department without a completed and signed checklist showing care legislation and policy, quality of health care, nursing education, practice and research. While each organization has its own constituent membership and unique mission, they are united by common values and convene regularly for the purpose of dialogue and consensus building, to provide stewardship within the profession of nursing. These organizations represent nurses in practice, nurse executives and nursing educators. The Tri-Council’s diverse interests encompass the nursing work environment, health care legislation and policy, quality of health care, nursing education, practice, research and leadership across all segments of the health delivery system. She can be reached at cclark@healthleadersmedia.com

7. St. Bernadine Medical Center in San Bernardino was fined $50,000 for a 2009 incident in which doctors failed to remove a blade extender tip of a Bullard laryngoscope that was used for an exam of the larynx. According to state documents, the patient was EXTREMELY suctioned in the larynscope in [patient’s] airway had the potential to result in imminent danger due to occlusion of the airway, as a result of aspiration of the blade extender tip,” according to state documents.

The patient had undergone an outpatient laparoscopic surgery. “During a routine follow-up phone call to the patient . . . [the patient] informed the hospital staff that she had ‘coughed up a piece of white plastic.,”’ Ms. Bird identified by the anesthesiologist as the extender tip of the laryngoscope she had used to intubate the patient, the documents said.

Tri-Council continued from page 5

grants allowed schools of nursing the flexibility to direct dollars to areas of greatest need, including hiring new faculty, upgrading equipment and clinical laboratories, and recruiting student nurses. Another type of program has had a stabilizing effect on past nursing shortages. Today’s schools of nursing need additional resources, particularly faculty, to educate the next generation of nurses.

Federal support is needed to recruit new nurses and retain them in healthcare settings. Nurse residency programs, in which a new nurse is provided a sustained training and mentorship program, have proven to be effective in improving nurse retention rates. A federal program should be created so that Medicare dollars are accessible for hospitals to create nurse residency programs. These programs allow new nurses to develop their skills and present a structured opportunity for diploma or associate degree nurses to continue their education through RN-BSN programs.

Advanced Practice Registered Nurses are in high demand given the need for primary care providers as well as the shortage of nurses in rural and underserved areas. However, little funding is available for their clinical education. Therefore, the federal government should invest Medicare dollars in the training of APRNs.
The Chair of the Commission on Magnet has announced Magnet designation for Hoag Memorial Hospital, Newport Beach, CA. They have been redesignated magnet. There are only 362 Magnet Hospitals in the United States. ANA\C wishes to congratulate Hoag Memorial Hospital for reaching this milestone again.

The Elephant in the Room: Huge Rates of Nursing and Healthcare Worker Injury

Nearly all of us are aware of nurses with back pain—or we may suffer from it ourselves. What we may not realize is how enormous the problem is. This article is dedicated to educating nurses about the risks they and their co-workers face in performing routine patient care. We’ll also give you information about what you can do to help: you and your co-workers.

The story is Elizabeth White. I am an RN who graduated in 1976 from the BYU College of Nursing. In December, 2003, I was working in the Surgical ICU at Arrowhead Regional Medical Center, the San Bernardino, California county hospital. My assignment that night was a 374 lb patient who was on a ventilator and also on spinal precautions. I was able to get help to turn and bathe him only once that shift. However, because he was on spinal precautions his mattress was flat, but had to be in reverse Trendelenburg because of the vent. He slid down to the foot of the bed, of course. Only one other staff member was available to help pull him away from the foot of the bed. By the end of the shift, I was in so much pain I could hardly walk. I ended up leaving clinical nursing: nearly six (6) years later I still have pain on a daily basis.

Last year, over 71,000 nurses suffered a back injury—but these are only the injuries that can be directly traced to work. 48% of nurses complain of chronic back pain, but only 35% have reported a work related injury. Many of the injuries will simply be endured by nurses and health care givers, with no recourse to any compensation. The cumulative weight lifted in a health care category in one typical eight hour shift is 1.8 TONS. Back injuries are incremental and often presents in unrelated circumstances.

Cost of the problem

Nurses back injuries cost an estimated $16 billion annually in workers compensation benefits. Medical treatment, lost workdays, “light duty” and employee turnover cost the industry an additional $10 billion.

Bureau of Labor Statistics show an inexcusable situation. Fig. 1 is a 2007 Bureau of Labor Statistics chart of the industries with the highest numbers of worker injuries. The top four categories: hospitals. In addition, the fourth and fifth categories are also of health care workers. In total, over 505,000 health care workers were injured. We know that a large percentage of these injuries are due to patient handling.

The causes of nursing back injury, or, YOU MUST NOT BE USING GOOD BODY MECHANICS

Hospitals and nursing homes are well aware of the risks of back injury resulting from patient care. Virtually all of us have had numerous “back injury prevention” classes over our work life. Why then, are the injuries so high? Is it because we just don’t listen? Or, is it because there is no safe way to manually lift and care for patients? Just look at the diagram above for a comparison between the NIOSH lifting standards and everyday patient care reality.

There are physiological reasons for this. William Marras, PhD, CPE, Honda Professor and Director of the Biodynamics Laboratory, Institute for Ergonomics at Ohio State University has made extensive studies on what happens to the human back under stress.

Pathophysiology, or, We all have our limits

When lifting tolerances are exceeded, the end plate of the intervertebral disc is damaged with tiny tears called microfractures. No pain is felt, since nerve endings are not present in the disc or the end plate. These microfractures then heal with protein agglutinens and scar tissue which is thicker and less permeable than the normal tissue. Over time, with many microfractures occurring, most of the end plate of the vertebra converts to scar tissue. The disc can no longer absorb fluid and nutrients. It becomes weakened, porous, soft and dry, which is the condition we know as degenerated disc. The softer tissue then bulges into the spinal column causing pain and muscle spasm, or the gel in the center of the disc can even herniate through the soft porous outer tissue, causing much greater pain. With severe degeneration, the disc can collapse, which narrows the space available for the nerve root. This narrowed space puts pressure on the nerves, causing pain and muscle spasm.

WHAT ARE SAFE LIFTING PRESSURES FOR THE DISC, OR, SHOULD YOU LIFT A “LITTLE 100 lb grandma”?

Downward pressure will cause damage to the disc end plate at pressures from 700 to 1100 lbs. Since many caregivers are physically small, the limits should be at the low end of this. However, most manual patient handling

Elephant in the Room continued on page 10
This illustration shows only the downward pressure, and doesn’t take into account the pulling (shearing) required to turn a patient on to his side. Nurses are the ONLY people who call 100 lbs light! Since there is no way to keep the weight bearing close to the body, no “good body mechanics” will compensate for the forces that damage your back.

There is no safe way to manually move a patient!!! Ever. You will be injured every single time you manually move a patient. This includes not only transfers, but turning, linen changes, rolling a patient on to a sling, boosting the patient up in bed, and assisting the patient to stand.

What is the solution to manual patient handling? Patients must be cared for. Every nurse knows it is not an option to simply refuse to care for their assigned patients.

Lifting teams? These teams are very expensive, though they have been shown to reduce injuries. But, what about the lifting team? They will be injured as well, inevitably. Also, no lifting team can be everywhere at once, and patients may need repositioning at any time, not just on the lifting team schedule.

Patient handling equipment is the only answer. There are multiple equipment solutions available on the market today. None does everything; but there is equipment available which will completely eliminate the manual lifting required for patient care.

We apologize to all makers of equipment which are not featured in this article. Care has been taken to present representative examples of equipment performing each task. Each facility should determine its own needs, and investigate each company and brand of equipment. We do not present the pros and cons of different types of equipment. A list of companies who manufacture and sell each type of equipment is provided, to give some place to start to those who might wish to begin. The list of companies by no means exhaustive. No remuneration has been given by any company.

Tasks which exceed safe spinal loading, requiring safe patient handling equipment:

- Transfers: bed to bed, or gurney to bed
- Transfers: bed to chair, chair to shower
- Bed repositioning: Side to side turn, and pull away from the side rail
- Bed repositioning: Boosting to the head of the bed
- Bed repositioning: Linen changes and bathing
- Sling placement: Bending and lifting to roll a patient on to a sling
- Assisting patient to stand
- Assisting a patient up from the floor

Lifting involves pure physical forces generated by inner and outer force, and turning the patient. When muscle force on the back is multiplied many times after bending and lifting patients, such as bending nine times, the lifting is more than 200 Ib per person per shift, and lifting is more dangerous than doing the same work while seated. Right setup makes the difference. The right setup makes the difference.

In the image below, the patient on the lift is being moved into a sitting position. The lift is shown to lift the patient up to the head of the bed.

There are also vehicle transfer solutions. Liko has a video on its web site.

This is a mattress that uses a blower to inflate a mattress, which then slides on a cushion of air. The brand name is Hover Matt. It removes most of the friction so the force needed for transfer is minimal.

Slide Boards reduce friction; not entirely but they help. Some facilities use a slick fabric tube or even garbage bags to reduce the friction in a bed to bed transfer.

A ceiling lift can facilitate transfers, after placing the patient on a sling. This is an Arjo lift.

An Arjo bariatric lift accommodates heavy patients.

This Liko mobile lift will lift in sitting, standing or horizontal positions.

The Arjo 4-point spreader bar puts the patient in a comfortable semi-reclined position.

Advanced hospital beds have skin saving programs, and some abilities to reposition patients. This is the Hill-Rom VersaCare bed. Some mattress overlays available will turn the patient by inflating the mattress on one side, then another.

This is an advanced mattress by Joerne, for pressure reduction.

The ErgoNurse, designed for bed repositioning, boosts a patient using the sheets. It will also lift for side to side turns, linen changes and bathing.

A Liko ceiling lift repositions a patient using a loop sling. Linen can be changed while the patient is suspended. Some specialty fabrics will allow boosting with minimal effort, then resist sliding again.

Linen changes and bathing of bedridden patients

Ceiling lifts can use repositioning slings to move the patient around for linen changes and bathing.

Placing the patient on a sling:

The ErgoNurse uses a sheet to suspend the patient, allowing sling placement without bending and lifting.

Vancare, Inc.

Help is on the horizon. Nationally, the Nurse and Health Care Worker Protection Act of 2009 has been introduced in both houses of Congress. In brief, these bills (identical at the present time) require OSHA to establish a safe patient handling standard, require health care facilities to establish safe patient handling programs, and allow health care workers to refuse to perform any lifting task which exceeds the standards or for which they have not been trained. The House bill is HR 2381, and the Senate bill is S 1788. It is certain that the wealthy and powerful hospital lobby will oppose the bill. However, we nurses have numbers on our side. Since there are about 2.5 million nurses, and about 1 million nursing aides, if we were all to contact our legislators, we could ensure the passage of these bills.

HOW TO CONTACT YOUR REPRESENTATIVES IN CONGRESS:
For the House of Representatives: Go to House.gov, and put in your zip code. The website will tell you who your representative is, and contact information for them.

Note! The volume of emails is now so great that less attention is paid to them. They will get it, but it might take a while. It is better to send a hard copy of your letter.

I have to start off by saying: those of you who were thinking about coming to ANA/C’s RN Lobby Days 2010 and didn’t, really missed out! As an ANA/C staff member, I was very excited about the convention this year. We had a new place of venue (the Capitol of California!) and the program itself was updated and refreshed. Until you’ve gone to this convention and listened to the speakers and what they have to say, you really have NO IDEA how exciting and important this information is! As I’ve said in the past, I never thought that medicine and politics had anything to do with each other. I had never thought about the fact that there are only a hand full of people, comparatively, making all of the decisions regarding any and all laws pertaining to the nursing profession (and any other issue you believe is important). Because of this, medicine and politics do, in fact, unite. As many of you know, that’s where ANA/C comes in. ANA/C is the legislative connection between the nursing profession and the political body that makes the final decisions on safety, personal rights for both patients and health care personnel, liability, and all other aspects of this honorable profession.

RN Lobby days is the educational connection that teaches the nurses of California not only why politics is important that they be involved, but how to do it effectively.

This year we had some great surprises. Monday’s event was held in a beautiful committee hearing room within the capitol. The turnout was great and the house was packed! Tricia Hunter, the Executive Director of ANA/C, former Assemblywoman, and a nurse was the keynote speaker. She did a fantastic job expressing the importance of our involvement and how much of an influence each nurse can be, both individually and as a group. In addition to Tricia, Senator Negrete-McLeod, and Brian Stieger - The Director of Consumer Affairs for the State of California, spoke.

Both discussed SB1111 (details of this Bill can be found on the legislature website), and did so very eloquently. Mr. Stigler brought in, and introduced, his staff. All of the staff are Governor appointed positions. He explained why each of them was selected for their jobs and where they came from. It was yet another example how everyone can make a difference and that we all possess skills that matter.

As part of Monday’s presentation, Tricia explained ANA/C’s position on AB 1802. AB 1802 was the bill the American Diabetes Association, in conjunction with others, were attempting to have passed regarding the administration of insulin to diabetic elementary school children by non-medical school personnel (details of this bill can also be found on your legislature website). The bill was to have first thing Tuesday morning. Our nurses learned a very important lesson that nurses must be present at all Committee hearings to provide expert testimony for all health care bills.

Electricity was in the air Tuesday morning! After a quick registration sign in with a continental type of breakfast, which was sponsored in part bySAFE Credit Union, everyone dispersed to the hearing of their choice. AB 1802 was scheduled to be first up, but due to the massive attendance of nurses supporting one side of the argument (ours), they postponed it for a short time to allow the opposition to have a fair amount of supporters present.

Finally, the hearing began and the real excitement started. Tricia did an outstanding job testifying, along with several others. In the end, not only did they defeat AB 1802, but it failed because 2 of the Assemblymen/women changed their vote due to testimony given by the nurses. This is something that is an uncommon occurrence. By the time the classroom portion of the day began, we had received the news and the excitement level skyrocketed! We were so happy that our attendees were able to see first-hand the reinforcement of the political lessons taught on Monday.

As always, at the end of each day we had a very informal discussion with the participants across the street, at the ANA/C office, as they came to turn in their evaluations. This was when we welcomed any and all comments and concerns regarding the legislative process, as well as a question and answer session. The general mood of the participants seemed to be very content and satisfied. However, we welcome all comments, negative or positive so that we can make adjustments to our program to better serve you. A very big Thank You to all who attended; those who testified and supported our event! It was a smashing success!!

COST EFFECTIVE
Safe Patient Handling equipment is very cost effective. When associated factors such as lost work days, modified duty, worker retraining, employee turnover, and even bedsores are factored in, the hospital recoups its investment in less than two years! Those who have instituted Safe Patient Handling programs have learned that not only is equipment needed, but training, education and surprisingly, enforcement. Though it may seem a paradox, many times caregivers resist change. They’ve been doing it one way for their entire working careers as caregivers, and feel that it takes too much time, or is inconvenient. Yet, they continue to incur injuries at high rates. However, when a no-lift policy is implemented (and if necessary, enforced), the staff will adopt the safe patient handling equipment especially as they realize their back pain and injuries diminish. Oregon SAIF, the State Worker Comp Company, instituted pilot Safe Patient Handling programs, and has seen injury rates and costs plummet. In Harris Methodist Ft. Worth, in Ft. Worth Texas, also instituted a pilot program, and went to zero injuries. Their pilot unit has had no injuries in 2½ years. We know that these injuries are entirely preventable.
The following four scholarships/awards are available through the Golden State Nursing Foundation.

The Jo Anne Powell Innovation in Nursing Award provides monetary recognition to Registered Nurses who have been creative in their practice.

The Betty Curtis Career Advancement Award provides funds for Registered Nurses embarking on an activity that will result in significant career advancement within nursing.

The Catherine J. Dodd Health Policy Scholarship provides funds for Registered Nurses enrolled in a graduate level academic program who have demonstrated some experience in government relations or health policy activities and express an intent to pursue health policy issues and activities in the future.

The Tony Leone Scholarship provides funds for Registered Nurses seeking a Bachelor’s degree in nursing.

Membership Form for the Golden State Nursing Foundation

Yes, I would like to become a Friend of the GSNF and receive emailed and mailed updates as to the foundations projects and events.

As nursing students we are often so concerned with memorizing the signs and symptoms of this disease or the side effects of that drug to pay much attention to anything going on outside the lecture hall or patient rooms. However, April 19th through the 23rd a fellow nursing student and myself were afforded the opportunity to study and spend some time learning about, and participating in, the fascinating world of healthcare politics.

The RN Lobby days are held in Sacramento every April, during which nurses travel from all over the state of California in order to educate themselves on the legislative process and how it influences us as nurses. The ANA/C (American Nurses Association) Senator Leadership (ANCNL) sponsors two students for the Nursing Student in Sacramento Internship. The recipients of this internship are given the amazing opportunity to go to shadow Dr. Louise Timmer during the RN Lobby days, as well as remain in Sacramento for two days afterwards in order to continue learning about how politics influence the nursing profession.

During the first few days of the internship “crossed the street” (which is a general term used in Sacramento for going to the capitol to attend a hearing hosted by a former California Assemblywoman Trixia Hunter. Ms. Hunter went into detail describing how legislative bills are introduced, debated, revised, debated, revised, debated, and eventually either passed or thrown out. We were also given the opportunity to witness a committee meeting in which the ANAC testified against the Senate Bill 1111, which addresses how medical professionals will be required in administering the best evidenced, up to date and compassionate care possible to every patient that we care for. This legislation that will affect all aspects of the nursing profession, and that profession should look forward to with excitement.

We also attended a committee meeting in regards to Assembly Bill 11802, which would have allowed unlicensed professionals to administer insulin to school children. The ANAC stood firmly against this bill and thanks to over a hundred testimonies against this bill by nurses and school workers the bill did not pass!

Perhaps the most amazing thing that I learned during this internship was the fact that we can stand up for what we want. Most students and young people in general, do not feel that they can have an influence in the political arena; but after spending just a few days in the capitol I learned just how accessible politics are to everyone. Although it may not be possible for us to travel to the capitol in order to dispute every bill that we disagree with (on the contrary to support a bill that we like), it may be a simple matter of calling, emailing or sending a letter to our representative. The senators that we had the opportunity to meet stated that they receive so few letters and emails from their constituents, that they actually do pay attention to them all.

Overall this experience was invaluable to me. I have a newfound respect for politics, and I now realize that I can be an active participant in the government. I encourage each of you to pay attention to what is going on in Sacramento. I was shocked to learn that thousands of bills are presented to Congress and Senate each year; an unforeseen number of which are passed into law without the average person knowing.

Take the initiative to educate yourself, do not stand idly by and allow laws to be passed, laws that could quite possibly impact our lives and careers. An easy way to keep track of what bills may be of interest to you, visit the ANAC website at http://www.anacalifornia.org/lgbm/ and here you will find a list of bills that the ANAC, through the efforts of the Legislative Committee, monitors all bills and regulatory changes on behalf of ANAC members. If a bill on the list is of concern to you, write to your senator or assemblyman.

Also, keep in mind that this internship will be offered again next year; visit the CNSA website to learn how to apply!

Nursing Student in Sacramento Internship (NSSI)

Submitted by Laura Barron, ADN student, Antelope Valley College

Like other professionals, nurses have a special responsibility with respect to legislation affecting them. Because nurses are extensively trained, have a tremendous impact and responsibility to the communities in which they live and work, they can and should exert great influence on legislative efforts affecting their professional conduct. Nurses are respected and educated community members, with powerful voices carrying weight in legislative development. Lawmakers are wise to heed nurses’ concerns. Nurses, because of their decisions will affect all aspects of the nursing profession, and that profession directly impacts each and every member of any lawmaker’s community. Because of the role played by nursing professionals. Public safety is protected and enhanced through careful application of laws covering all aspects of nursing;

From Patients Rooms to Capitol Hill

Stephanie Hohmeister, BSN student San Diego State University

As nurses we have the capability and the responsibility to administer the best evidenced based, up to date and compassionate care to every patient that we care for. It is our job as a nurse to make sure that every potential nurse should look forward to with excitement and eagerness. In the United States the Healthcare field is about to undergo massive changes that could forever change the way that patients are cared for; therefore it is our responsibility to pay close attention to what is happening with the new legislation that will affect us personally as a RN and as a nurse.

It is my responsibility not only as a nurse, but also as a student to try and understand how the legislative process works, as well as further my knowledge of the current and pending legislation that will influence my practice as a nurse. It is my responsibility not only as a nurse, but also as an American citizen to involve myself in the practice of the government. Have an in depth understanding or the legislation that will affect me personally as a RN will allow me to care for my patients to the best of my capabilities and hopefully influence others around me to do the same.

The Health Care Reform Act that passed through the house in December of 2009 is a step toward a positive change. If enacted the act will take great steps towards ensuring affordable and quality health insurance to millions of Americans who currently do without, it does little to change the way that medicine is practiced, and therefore I do not see how it will serve to quell the skyrocketing price of healthcare in our country. Instead we need legislation that will prevent abuse of the healthcare system; by physicians, by organizations or by patients.

Another vital opportunity is the National Patient Advocate Act, introduced on May 13, 2009. This bill sets guidelines for nurse/patient ratios and would allow nurses to serve more effectively as patient advocates without fear of repercussion. While this bill is not nearly as widely publicized as the Presidents Health Care Reform; to nurses it is just as important. I support this bill fully and truly hope that its significance is recognized and is passed. We must stay involved in legislation in order to ensure that we are given the resources necessary to provide safe and effective care for our patients.

In attending the RN lobby days I hope to gain a greater understanding of how the legislative process works, as well as further my knowledge of the current and pending legislation that will influence my practice as a nurse. It is my responsibility not only as a nurse, but also as an American citizen to involve myself in the practice of the government. Have an in depth understanding or the legislation that will affect me personally as a RN will allow me to care for my patients to the best of my capabilities and hopefully influence others around me to do the same.

I strive to think critically, behave respectfully, and communicate clearly. While solving those problems we encounter during our nursing training, both those created by our teachers for our education, as well as the ones we encounter in our daily lives and regular interpersonal experiences, I honestly encourage my peers to behave in a similar fashion. I am learning about my own strengths and weaknesses as I develop skills to enter the health care profession.

The additional knowledge I can gain through this opportunity will make me a better professional nurse. Please accept my application for the Nursing Student in Sacramento Internship.
The Tournament of Roses® 120th parade is now a memory of holidays past. We are embarking on a new decade with the completion of the Nurses’ Float just a short four years away.

Bare Root, Inc. has interviewed five float builders, narrowed down the choice to two builders and then made the final decision—Phoenix Decorating Company. The Board of Directors of Bare Root, Inc. were able to view the actual construction of parade floats and as the 2010 parade was nearing a reality, the actual placement of the flowers on the floats. The pride the volunteers took in their jobs was extremely edifying. The Board believes Phoenix will have a conceptual drawing available soon for all to view which will bring the reality of the Nurses’ Float even closer.

Keeping the reality of the project in mind, Bare Root, Inc. is encouraging nurses nationwide to support the project through financial donations and spreading the word about the project.

Bare Root, Inc. would like to introduce you to a nurse working at the grassroots level and what she has been able to accomplish for the Nurses’ Float. She is:

Sylvia S. Estrada, RNCWHCN, MSN, MSHCM, BSN
Breast Research Nurse Coordinator
Samuel Oschia Comprehensive Cancer Institute
Cedars-Sinai Medical Center, Los Angeles, CA

Sylvia read an article in Advanced Nurses about the Nurses’ Float and thought what a great way to feature nurses and the profession of nursing to the world. Sylvia chooses to work at the grassroots level and has convinced the three Nursing Associations she belongs to support the Nurses’ Float project. As a result there has been a three year commitment to fundraise for the Nurses’ Float by:

• California Nurse Practitioner—Chapter 17 (CANP)
• Greater Los Angeles Area Oncology Nurses
• Los Angeles Chapter of Hispanic Nurses (LA NAHN)

Sylvia has succeeded in placing Sally Bixby RN on the agenda for each Association’s meetings to present the project and has obtained exhibit space at the Los Angeles Hispanic Nurses conference. Sylvia’s love of nursing, commitment and zeal toward the Nurses’ Float project is an example of the Bare Root, Inc dream come true of what a grassroots movement can be—one that keeps growing and giving.

It is with love of our profession and of being a nurse that we invite you to join Bare Root, Inc in making this event a reality in 2013.

Monica Weisbrich, RN, President Bare Root, Inc.
Judy Dahle, RN, CEO
Paul Wafer, RN, Vice President Marketing

Legal Victory for ANA, School Nurses, and the Patients We Serve as California Appellate Court Upholds Decision To Recognize California Nursing Practice Act

SILVER SPRING, MD—The American Nurses Association (ANA), the nation’s largest nursing organization, is pleased to announce a significant victory on the issue of allowing unlicensed personnel to administer insulin in California schools. The California Court of Appeal, Third Appellate District upheld the decision of the trial court that allowing unlicensed school personnel to administer insulin violated California laws, including the California Nursing Practice Act.

“This is a victory for patient safety. ANA and our state member, ANA/California, undertook this case with the California School Nurses Organization, to assure that the schools provide safe health care by licensed nurses to diabetic students, which is what the law requires. Budget woes cannot excuse compliance with the nurse practice act and the student’s right to a public education in a setting that accommodates their health needs,” said ANA President Rebecca M. Patton, MSN, RN, CNOR. “We are gratified the higher court has affirmed the lower court’s ruling. ANA remains deeply committed to ensuring safe, quality healthcare for students and our continued support for the California Nursing Practice Act in its intent to protect the public.”

In its decision, the appellate court stated, “While we can guess that funding of the required services may be difficult for schools in these economic times, we have no evidence that such difficulties cannot be overcome in order to meet the requirements of federal [disability] law.”

In his ruling of December 2008, Judge Lloyd Connelly made it clear that the State Board of Education does not have the authority to decide who is qualified to administer medications, nor can it supersede the current Nursing Practice Act, which defines administration of medication as a nursing function that cannot be performed by unlicensed individuals, except in certain circumstances. The appellate court stated that “California’s legislative choice to allow unqualified success!”

As the largest nursing organization in the U.S., ANA is delighted to participate as a financial sponsor of this historic initiative. The Nurses Float is a once-in-a-lifetime opportunity to showcase and celebrate—on a grand national stage—our noble profession and the millions of talented, dedicated individuals who provide outstanding nursing care for our nation’s citizens every day. Nurses have truly earned this spotlight, and ANA is proud to be a part of this unique event.

As your organization continues to build awareness, momentum, and excitement for this event, we look forward to collaborating with you to help make the F4TF initiative an unqualified success!
2010-2012 Consent to Serve

Elected Position Descriptions for the American Nurses Association \ California

Board of Directors

The Board of Directors (BOD) is the corporate body of ANA\C composed of four officers (President, Vice-President, Secretary and Treasurer) and four directors elected by the general membership. To be eligible to serve on the BOD, a person shall hold current membership and must not concurrently serve in a leadership position of another professional organization if such participation might result in a conflict of interest with ANA\C.

Refer to ANA\C bylaws, Article VII for a complete description of the responsibilities of the Board of Directors. Bylaws are available at www.anacalifornia.org or through the office at 916-447-0225.

One position for each officer listed and four positions for director available.

Duties of Officers

President of ANA\C shall serve as the Official representative of the association and its spokesperson on matters of association policy and position; as the chairperson of the General Assembly, the Board of Directors and the Executive Committee of the Board; an ex-officio member of all committees except the Ballot Committee; and a delegate to the House of Delegates of ANA.

Vice-President shall assume duties of the President in the President’s absence and shall oversee any necessary review of bylaws, strategic pathways, and Organizational Process and Appeals. The Vice-President shall also oversee planning and preparation for the General Assembly including Awards, Reference and Bylaws activities at the Assembly.

Secretary shall be responsible for ensuring that all records are maintained from the meeting of the General Assembly and the BOD, and notifying members and chapters of meetings of the General Assembly.

Treasurer shall be responsible for supervising the fiscal affairs of the association and providing reports and interpretations of the financial condition of ANA\C to the membership, General Assembly and the BOD.

Director, Nursing Practice shall focus on understanding, interpreting, and advocating for legislative, regulatory, and policy issues regarding nursing practice.

Director, Nursing Education shall focus on understanding, interpreting, and advocating for legislative, regulatory, and policy issues regarding nursing education.

Director, Membership and Communications shall focus on membership recruitment, retention, and resources. This director’s responsibilities will include oversight of the newsletter, website, list-serves (Yahoo groups), archives, chapter development, and public relations.

Director, Legislation shall be the chairperson of the legislative committee. Responsibilities include establishing the legislative committee, reviewing legislation, moderating email communication and votes for the committee, and supporting RN Lobby Days.

Ballot Committee: Responsible for developing and ensuring the integrity of the ballot and election process. (Three positions available)

ANA Delegate will attend and participate at the ANA House of Delegates in conjunction with the ANA biennial convention in Washington, DC, June/July biannually. There are eight to twelve seats available (depending on current membership). One position is automatically filled by the ANA\C President. All persons who choose to run for this category and who are not elected by vote, serve as alternates in the event space becomes available.

Terms of Elected Positions

All terms are for two years, ending upon election of successors in 2011.

If elected or appointed, I consent to serve.

Print Name: __________________________ Date: __________________________

Signature: __________________________ Date: __________________________

Please submit a short paragraph or two about yourself and your qualifications for the position you are running for, include any current or past positions that will assist you and any future ideas that you would like to see implemented during your service on the board or other positions. This information will be included in the candidate information packet sent to all voting members of ANA\California.

All consent to serve forms must be post dated and received by the ANA\California office by the posted date. Fax to: 916-447-0225 or mail: ANA\C, 1121 L Street, Suite 409, Sacramento, CA 95814, email: anac@anacalifornia.org. Questions please call 916-447-0225.

  - ☐ 62 years of age or over and not earning more than Social Security allows

- ☐ Special Membership Dues—$63.75
  - ☐ 62 years of age or over and not employed
  - ☐ Totally Disabled

**Note:** $7.50 of the SNA member dues is for subscription to The American Nurse. A percentage of your dues may or may not be applied to an SNA/DNA subscription. State nurses association dues are not deductible as charitable contributions for tax purposes, but may be deductible as a business expense. However, that percentage of dues used for lobbying by the SNA is not deductible as a business expense. Please check with your SNA for the correct amount.
